

Qradar

- [Ignore when another rule matches](#)
- [Qradar expiring whitelist](#)
- [Qradar global whitelist](#)
- [Reference Maps](#)

Ignore when another rule matches

When a building block or rule matches it's specific fields, do not fire matched events

and NOT when a subset of at least this number of these rules, in order, from the same| different source IP to the same destination IP, over this many seconds

Qradar expiring whitelist

Use AQL filter query

```
username LIKE 'testUser' and LONG(DateFormat(starttime, 'yyyyMMdd')) < 20190429
```

Qradar global whitelist

Use Routing Rules with **forwarding > bypass correlation**

For IP ranges, use Network Hierarchy.
